

DESCRIPTION

• Lanyard with 2x carabiners. The RGL12 is an adjustable restraint lanyard and acts as a leash for an operative working at height. The adaptability of the product ensures that the correct length can be selected for the task in hand. It is important to understand the principles of “fall-restraint” as the RGL12 can only be used for fall restraint, as there is no shock absorption built into the system. If there is any possibility of an operative stepping/falling over an exposed edge, or falling through a fragile surface, a fall arrest product should be used. The 37kN webbing used in the manufacture provides greater strength compared to other webbing and systems. The RGL12 should never be used to extend another fall arrest product. Comes with 2x 17mm Steel Screwgate Karabiner Screwgate closure which must be closed manually Used for rope access, fall arrest and rescue applications Basic universal karabiner used Individually serialised for complete traceability and inspection control
